Local Coordination to Advance
PSNERP–identified project Livingston
Bay Restoration Feasibility Study

The project site is located on the eastern side of Camano Island in the Puget Sound of Washington State. Livingston Bay is part of the larger Port Susan Bay and Greater Skagit and Stillaguamish River Delta, which encompasses two of the 16 major river deltas in the Puget Sound, and is a Site of Regional Importance in the Western Hemisphere Shorebird Reserve Network. The project scope of work is located within Water Resource Inventory (WRIA) 6 in Island County, Washington.

WHAT WE’RE DOING

The project will investigate opportunities for permanent protection of over ¾ mile of shoreline, 25 acres of tidelands, and 270 acres of diked farmlands and freshwater wetlands to enable future restoration to a fully functioning tidal estuary and wetland habitat with associated ecosystem services.

WHY IS THIS ISSUE IMPORTANT?

The protected and restored estuarine habitat will enhance reliance for human and wildlife communities against anticipated sea-level rise and associated impacts of climate change influencing erosion and landslides, flooding and inundation, and degradation of marine water quality.

WHAT YOU CAN DO

Get out in nature! Make new friends! Find out what great land stewardship is all about. The Land Trust is always on the lookout for people who are as passionate about caring for land as we are.

ABOUT: Whidbey Camano Land Trust

Whidbey Camano Land Trust, an independent, nationally accredited, 501(c)3 nonprofit organization. The mission of the Whidbey Camano Land Trust is to actively involve the community in protecting, restoring, and appreciating the important natural habitats and resource lands that support the diversity of life on our islands and in the waters of Puget Sound. Since its inception in 1984, the land Trust has protected over 10,000 acres.
