Curley Creek Prioritized Restoration

Curley Creek is one of three high priority creeks along the East Kitsap shoreline, important for Coho, Chum, ESA listed Steelhead and Chinook. Fish passage barriers, channelization, lack of wood, and pollutants are all potential issues to address in Curley Creek.

What we’re doing

Mid Sound will build on the Suquamish Tribe’s 2017 Curley Creek watershed assessment and will work with landowners, partners, and consultants to prioritize restoration actions benefiting salmonids. We will then produce a conceptual or preliminary design of the highest-ranking feasible project.

- Identify and rank the top 15 potential restoration projects on Curley Creek
- Conduct landowner outreach and feasibility analyses on priority projects.
- Develop conceptual or preliminary designs for the top selected project.

Why is it important?

Restoration projects will improve salmon runs in Curley Creek, important to supporting tribal, commercial, and recreational fisheries, and the overall health of the Puget Sound.

WHAT YOU CAN DO

- Get engaged, join a restoration work party with Mid Sound or another local group.
- Do your part to keep streams clean! Learn how you can reduce pollution at our website.
- Live near a stream or on Puget Sound? Get in touch! We’d love to help you help salmon!

ABOUT MID SOUND FISHERIES ENHANCEMENT GROUP

Mid Sound Fisheries Enhancement Group works with communities in East Kitsap, the Cedar-Sammamish watershed, and the Green-Duwamish watershed to restore local and nearshore habitat so salmon thrive.

We work with landowners on voluntary projects on streams and beaches, engage volunteers in hands-on local projects, and educate youth and adults alike.
